

*The World Leader in
Powder Coating Systems*

*Aftermarket
replacement parts
may fit your powder
coating equipment,
but chances are
they'll give you
fits later on!*

ITW **Gema**

ITW GEMA'S XACTFIT™ GENUINE REPLACEMENT PARTS

An ITW Gema powder coating system is an investment in the future of your company. So why short-change the performance of your equipment by using sub-standard, non-ITW Gema aftermarket replacement parts?

Only ITW Gema XACTFIT components and replacement parts are made to work flawlessly with ITW Gema's world renown powder coating systems. The same uncompromising design, engineering and assembly standards that go into the original equipment, goes into to all ITW Gema XACTFIT replacement parts as well.

The use of aftermarket replacement parts can affect final finish quality and system reliability, as well as add to system downtime, and compromise the safety of your operators. You might save money in the short-term, but aftermarket replacement parts can cost you a lot more in the long-run.

ITW Gema's OptiGun™ equipped with the patented self-cleaning electrode.

HERE'S WHY:

XACTFIT parts are designed to work

Aftermarket replacement parts don't benefit from ITW Gema's design expertise and precision manufacturing. They may look like ITW Gema parts, but they don't perform like ITW Gema parts.

XACTFIT parts are designed to last

Original ITW Gema parts are more durable and keep your powder coating equipment operating at like-new performance levels. And ITW Gema parts can last up to twice as long as aftermarket replacement parts.

XACTFIT parts are designed to maintain your system warranty

Aftermarket replacement parts are poor imitations of the real thing... genuine ITW Gema parts...and can potentially invalidate your warranty or worse yet, cause system malfunctions and create dangerous situations for your operators.

ITW Gema filter cartridges feature a specifically designed media that separates particles down to 0.3 microns.

XACTFIT parts are designed to meet worldwide certifications

ITW Gema systems, components and parts are CE, PTB and FM certified and licensed. By using aftermarket replacement parts, you may void these certifications.

ITW Gema's OptiFlow™ Pump with only two major wear parts for high reliability and low operational costs.

XACTFIT parts are designed to perform

ITW Gema replacement parts assure consistent, high-level performance of your powder coating equipment, which helps to reduce defective finish rejects, lower your powder usage, lower your labor costs and increase productivity.

XACTFIT parts are easy to get

ITW Gema has more nationwide parts distribution capabilities than anyone else in the industry. That means critical wear parts are always close by for immediate delivery. And ITW Gema's ServiceNet™ 24 Hour Support Network provides the technical know-how to get your system back on-line as quickly as possible.

Don't jeopardize the integrity of your powder coating operation by using aftermarket replacement parts. Insist on ITW Gema XACTFIT replacement components and parts for your ITW Gema powder coating systems. They're the only true fitting replacement parts for your ITW Gema equipment!
